The Invisible Risk to Health Care Providers

WHO IS AT RISK

WHERE

WHAT ARE THE POTENTIAL MOLNIDIPINE EFFECTS FROM WAG EXPOSURE?

HOW EXPOSURE HAPPENS IN THE PACU

7 IN 10

Patients continue to inhale WAG up to 40 minutes after leaving the operating room.

SOLUTION

SOURCE: CONTROLLED SCALVINGENING

An effective method for decreasing PACU clinician exposure to WAG is the use of a source control scavenging device. This device includes a hollow fiber membrane with Capilox™ Technology from Trid bombers.2
